

Ongoing research plan

- Solar exposure and skin cancer
- Phytoestrogens and colorectal cancer
- Fruits and vegetables consumption and risk to cancer (total and several sub sites)
- Coffee consumption and endometrial cancer
- Atkin`s (low carbohydrate/high protein) diet and incidence of cardiovascular diseases
- Allergy and breast cancer
- Ultraviolet exposure and overall mortality
- Ultraviolet exposure and cancer incidence (several sites)
- Ultraviolet exposure and cardiovascular diseases
- Ultraviolet exposure and risk or respiratory diseases morbidity and mortality
- Overall effect of alcohol consumption on mortality (risk/benefit analysis)
- Smoking impact on overall mortality and diseases in Scandinavian women
- Risk factors for gliomas
- Trombosis and hormone replacement therapy
- Oral contraceptives and depression
- Reproductive factors, use of hormones, and risk of malignant melanoma
- Sleep disfunction and health outcomes: overall mortality, cancer incidence, cancer survival, cardio-vascular and mental morbidity
- Health effetes of mediterranean diet - cancer, cardiovasvular diseaes, mortality
- Types of fat and endometrial cancer risk
- Solar UV exposure, dietary vitamin D and the incidence of cardiovascular diseases, respiratory diseases and diabetes mellitus
- Alcohol, smoking and breast cancer pooled analysis - in collaboration with the American Cancer Society
- Bladder cancer consortium, pooled analysis in collaboration with Unit of Urologic Epidemiology, University of Birmingham, UK
- International collaboration on reproductive health and chronic disease
